

NENAD STOJANOVIKJ

me@nenad.dev • nenad.dev • github.com/nenad • Berlin, Germany

Staff-level platform engineer and technical leader with 10+ years of experience building developer platforms, CI/CD systems, and cloud infrastructure. Proven record of reducing operational costs, accelerating software delivery, and leading cross-team architectural change.

EXPERIENCE

Senior Software Engineer, Reddit

Oct 2022 – Present, Berlin

Team: Developer Experience / Infrastructure

- Defined the vision and roadmap for the Release Platform, then architected and built real-time deployment monitoring, one-click rollbacks, and automated health assessment used by approximately 1,000 engineers across nearly every team; reduced manual release monitoring by an estimated 1,000 engineering hours per week.
- Introduced Prometheus-based CI capacity metrics that improved autoscaling decisions and reduced idle compute costs by an estimated \$300K annually.
- Architected an LLM-assisted CI log analyzer that reduced average root-cause identification time from 2–4 minutes to under 30 seconds, based on an engineer survey.
- Led a cross-team migration of the CI system and Release Platform from a legacy Kubernetes cluster to a modern platform, improving security, simplifying upgrades, and making workloads easier to move between clusters.
- Built a webhook relay that standardized 55 GitHub and Drone CI event types, handled peaks of 2,000 messages per minute, and supported integrations for 10 teams.

Staff Engineer, HelloFresh

Jan 2020 – Sep 2022, Berlin

- Architected and rolled out a maintenance-free data privacy platform that handled GDPR requests across different database technologies for 15 teams without requiring custom code.
- Led the in-house replacement of a vendor dashboard with a scalable real-time view of warehouse data, saving EUR 20K annually and enabling faster responses to requests.
- Conducted an architectural review that reduced operational overhead and technical debt by eliminating one Redis and two RabbitMQ clusters.
- Built per-pull-request, on-demand end-to-end testing with a QA engineer, eliminating rollbacks caused by failed end-to-end tests.

Senior / Software Engineer, HelloFresh

Sep 2016 – Jan 2020, Berlin

- Led an early adopter effort to migrate services to Kubernetes and Istio, which improved the reliability during service deployment and provided metrics and alerting out of the box.
- Drove distributed tracing adoption to more than 80% in three months by applying and advocating for observability best practices.
- Introduced an in-memory caching mechanism for network calls that reduced the response time of downstream services from ~1s to 1ms with a cache hit rate of 99%.

Software Engineer, Vox Teneo

Jul 2015 – Aug 2016, Skopje

- Introduced automated testing practices that increased coverage to approximately 70% and reduced critical incidents to near zero.

EDUCATION

Bachelor of Software Engineering, Gavrilko Derzhavin University

2017

SKILLS

- Platform and infrastructure: Kubernetes, Terraform, Helm, Linux, Istio, CI/CD
- Observability and distributed systems: OpenTelemetry, Prometheus, Grafana, Kafka, Kafka Connect, Debezium
- Languages: Go, Python, Java, Kotlin, JavaScript
